

# **NICKEL** in Sweden

GUNGNIR

High-Grade Nickel Sulphide Drill Core – Lappvatnet Project

**Gungnir Resources Inc.**

**GUG: TSX-V | ASWRF: OTCPK**

## WHY SWEDEN ?

Sweden is the leading mining nation in Europe and continues to receive high institute rankings as one of the top countries in the world for exploration and mining. **Mining is a traditional industry in Sweden** which extends back over a thousand years. Sweden covers part of the Fennoscandian shield, a **mineral rich but highly underexplored region**. Sweden continues to **offer excellent ore discovery potential**, in particular under glacial till (sand and gravel) which covers large areas of Sweden, **and great infrastructure**.

# Forward-Looking Information

Certain statements in this presentation may constitute “forward-looking information” within the meaning of applicable securities laws (also known as forward-looking statements). Forward-looking information involves known and unknown risks, uncertainties and other factors, and may cause actual results, performance or achievements or industry results, to be materially different from any future results, performance or achievements or industry results expressed or implied by such forward-looking information. Forward-looking information generally can be identified by the use of terms and phrases such as “anticipate”, “believe”, “could”, “estimate”, “expect”, “feel”, “intend”, “may”, “plan”, “predict”, “project”, “subject to”, “will”, “would”, and similar terms and phrases, including references to assumptions.

Forward-looking information is based on a number of key expectations and assumptions made by Gungnir, including, without limitation: expectations of potentially expanding and defining the existing resources are reasonable and possible; access to the resources will remain available; transportation and infrastructure will remain available as anticipated; the COVID-19 pandemic impact on the Canadian and global economy and Gungnir’s business, and the extent and duration of such impact; no change to laws or regulations that negatively affect Gungnir’s business; there will be a demand for Gungnir’s services and products in the future; Gungnir will be able to operate its business as planned; Gungnir will be able to access capital markets and successfully complete financings on terms it determines to be reasonable; and Gungnir’s plans for future exploration and development of its properties is reasonable and will be possible within the anticipated timelines. Although the forward-looking information contained in this news release is based upon what Gungnir believes to be reasonable assumptions, it cannot assure investors that actual results will be consistent with such information.

Forward-looking information is provided for the purpose of presenting information about management’s current expectations and plans relating to the future and readers are cautioned that such statements may not be appropriate for other purposes. Forward-looking information involves significant risks and uncertainties and should not be read as a guarantee of future performance or results as actual results may differ materially from those expressed or implied in such forward-looking information. Those risks and uncertainties include, among other things, risks related to: expectations related to upgrading and expanding existing resources may not be accurate in part or at all; no certainty that any economically viable mineral deposit will be located on Gungnir’s properties; that Gungnir may not be able to complete its planned drilling as anticipated; the impacts of the COVID-19 pandemic; the impacts of war and/or other international conflicts; ability to access capital markets and complete successful financings on terms Gungnir determines to be reasonable; environmental matters; changes in legislation or regulations; receipt of required licenses, permits and approvals; and resource estimates may not be accurate and may differ significantly from actual mineral resources. Management believes that the expectations reflected in the forward-looking information contained herein are based upon reasonable assumptions and information currently available; however, management can give no assurance that actual results will be consistent with such forward-looking information. The forward-looking information contained this news release is expressly qualified in its entirety by this cautionary statement. Forward-looking information reflects management’s current beliefs and is based on information currently available to Gungnir.

The forward-looking information contained this presentation is expressly qualified in its entirety by this cautionary statement. Forward-looking information reflects management’s current beliefs and is based on information currently available to Gungnir, and Gungnir assumes no obligation to update or revise such information to reflect new events or circumstances, except as may be required by applicable law.

The technical information in this presentation has been prepared and approved by Jari Paakki, P.Geo., CEO, and a director of the Company. Mr. Paakki is a Qualified Person under National Instrument 43-101.

# Lappvatnet Drill Hole LAP22-25 – Close-Up View of High-Grade Nickel Mineralization

Gungnir has only drilled a total of **8 months** evaluating this high-grade Nickel deposit

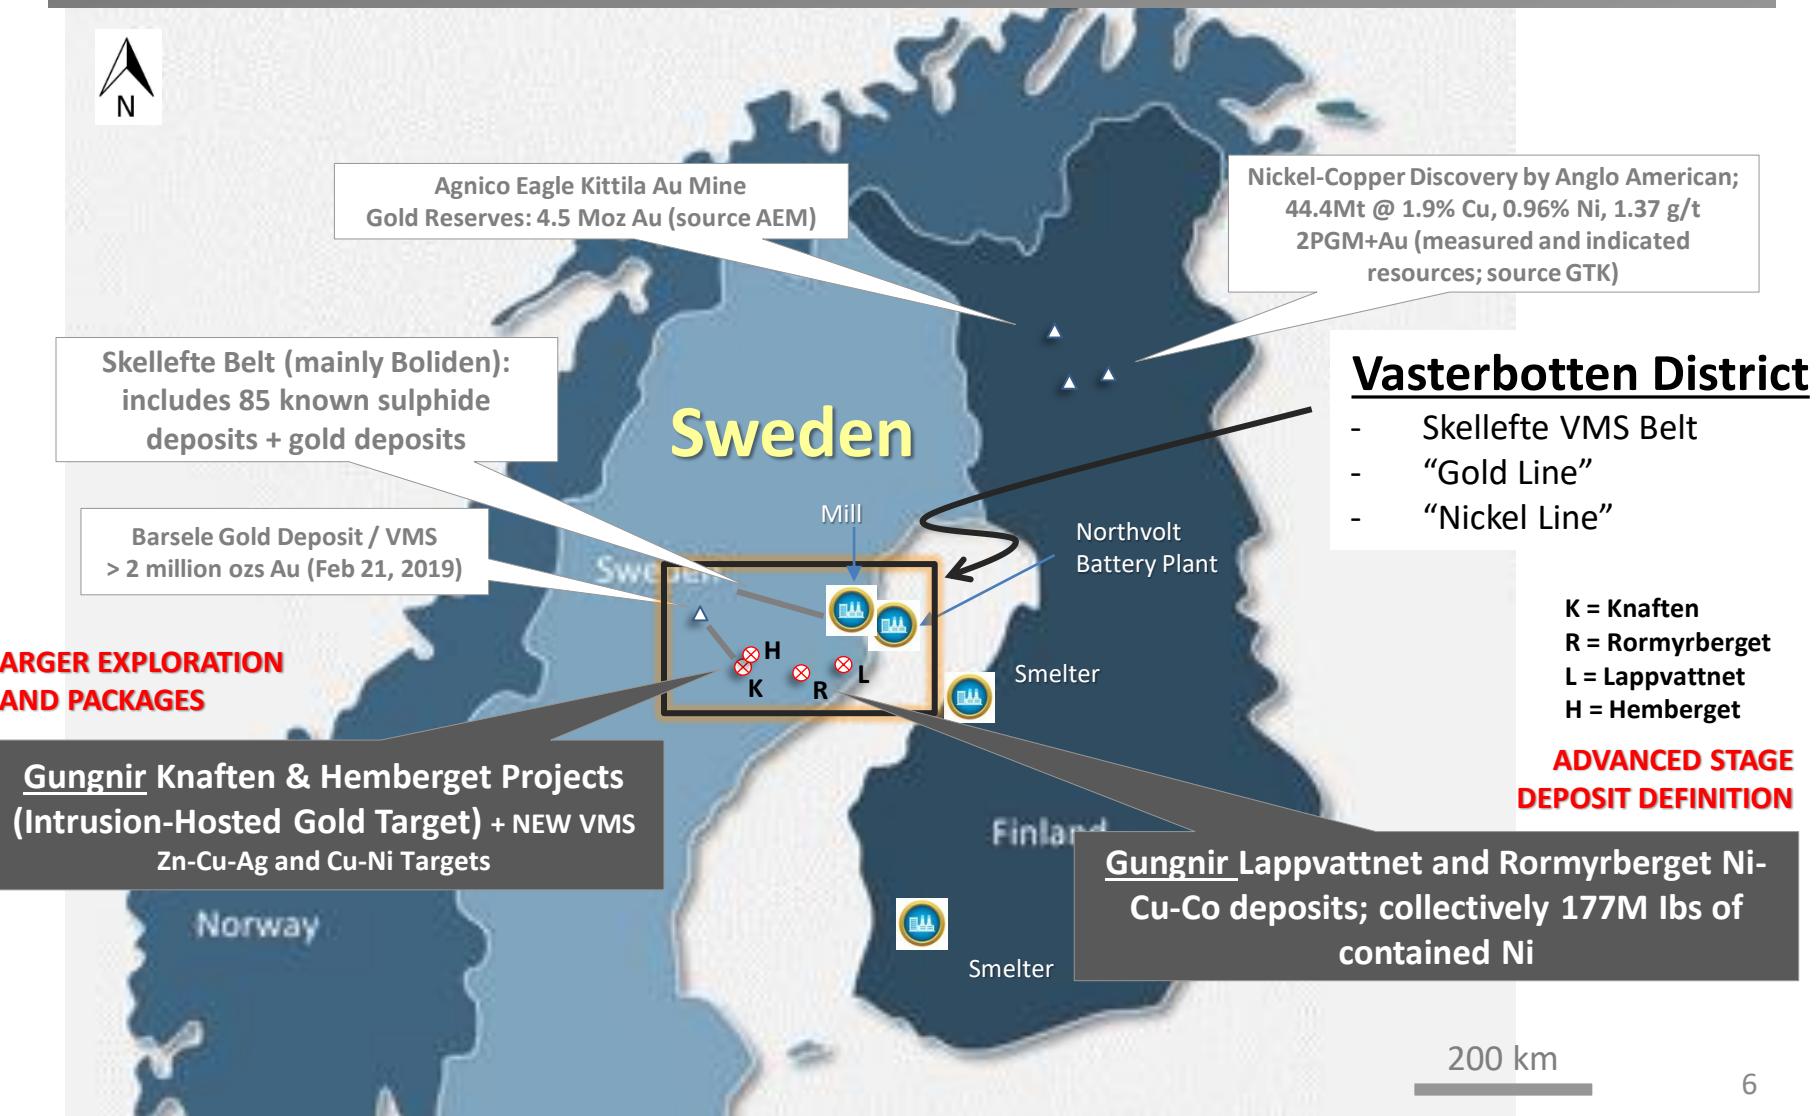

# Nickel Projects

- Two of the top nickel sulphide deposits in Sweden; **currently focused on potentially expanding and upgrading Lappvattnet**
- Collectively contain 80 million kg of nickel (using historic results from the 1970s):
  - **Lappvattnet:** Inferred Resource of 780,000 tonnes grading 1.35% nickel for 23.1 million lbs (10.5 million kg) of nickel.
  - **Rormyrberget:** Inferred Resource of 36,800,000 tonnes grading 0.19% nickel for 154 million lbs (70 million kg) of nickel.
- 100% Gungnir subject to a royalty option purchase agreement for 2% GSR for CDN\$8 million from Altius Minerals (Lappvattnet and Rormyrberget together)
- Accessible year-round with good transportation and industrial infrastructure including shipping facilities, and are located about an hour drive from Boliden's mill complex
- **Next big test at Lappvattnet will be drilling below the 120-metre level and further along strike and down-plunge to the east**
- Company's first drill program at Lappvattnet initiated in August, 2021; drilled a total of 5,435 metres in 45 holes in 2021 and 2022
- Permit approved for up to 10,000 metres of drilling at Lappvattnet to the end of 2023
- Added new **Hemberget** project, greenfield Cu-Ni target

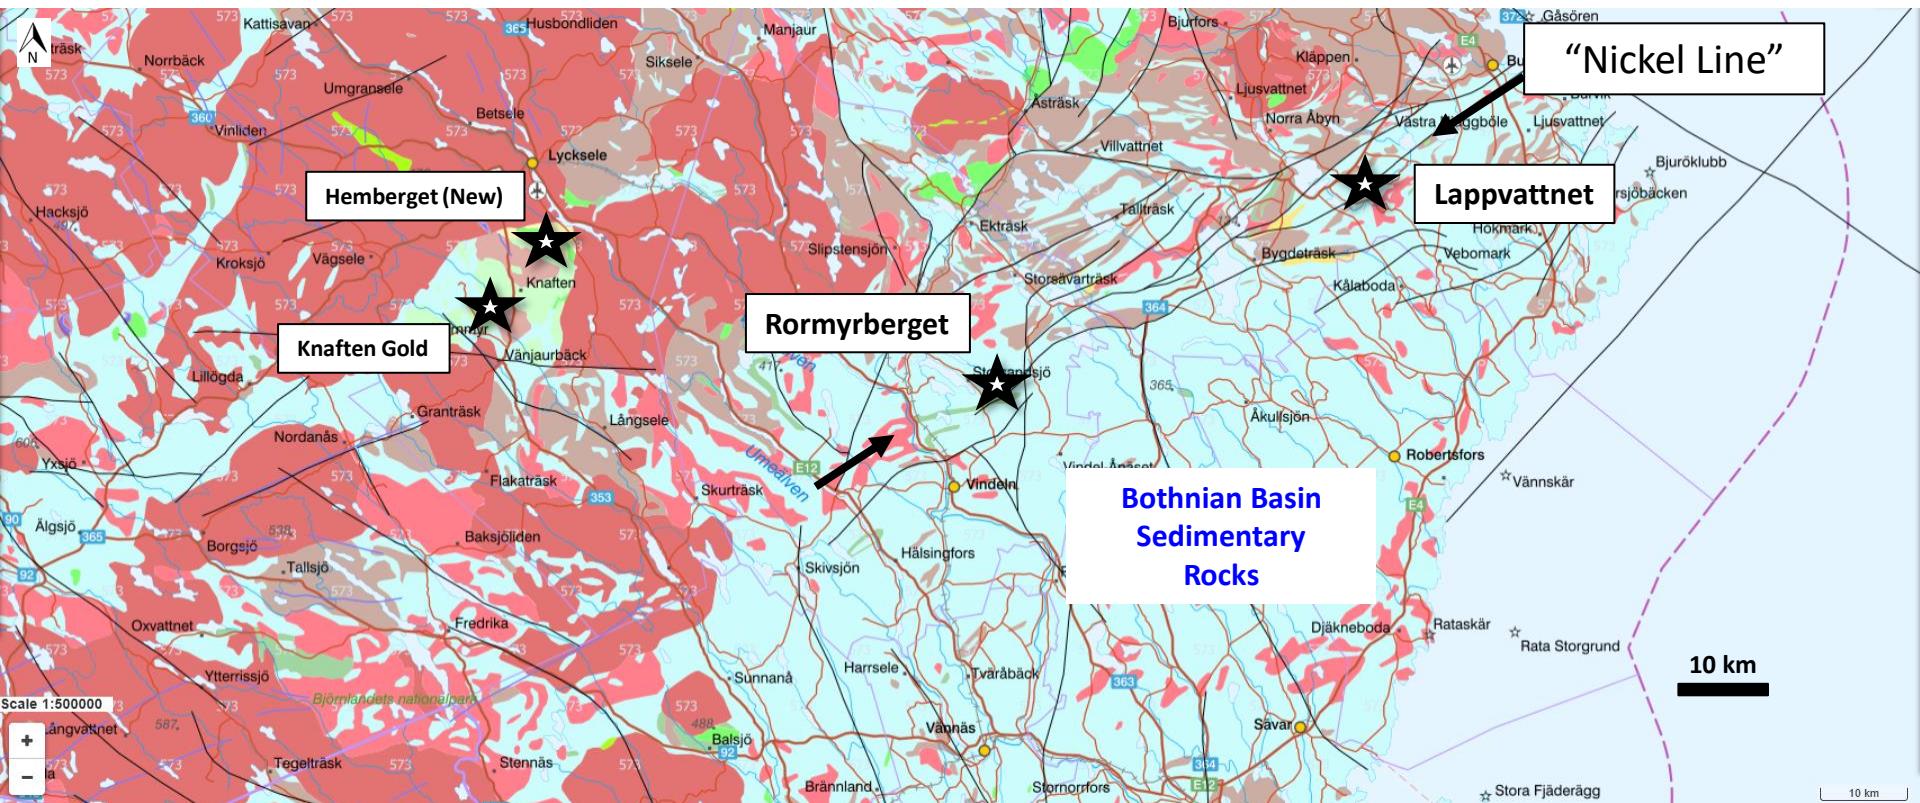

# 2021/22 Lappvatnet Drill Highlights

- **3.19% Nickel over 4.25 metres within a 10.4-metre interval grading 1.51% Nickel** in drill hole LAP21-02 (from 45 metres)
- **2.62% Nickel over 5.65 metres within a 14.0-metre interval grading 1.40% Nickel** in drill hole LAP21-05 (from 60 metres)
- **1.74% Nickel over 10.00 metres** in drill hole LAP21-13 (from 21 metres)
- **36.00 metres grading 0.93% Nickel** in drill hole LAP21-04 (from 49 metres)
- **3.02% Nickel over 5.66 metres within a 9.0-metre interval grading 2.35% Nickel** in drill hole LAP22-19 (from 66 metres)
- **4.04% Nickel over 5.76 metres within a 18.28-metre interval grading 1.49% Nickel** in drill hole LAP22-25 (from 58 metres)

# Gungnir Projects Located in Prime Location in the Nordic Region; Excellent Mineral Potential and Infrastructure

# Regional Geology – “Nickel Line”

“Nickel Line”: Local term for linear distribution of nickel occurrences along the north edge of Bothian basin sedimentary rocks (1.96 to 1.87 Ga); nickel sulphides associated with local peridotite and pyroxenite units.

Bothnian sedimentary group extends to Hemberget which hosts a large, layered mafic-ultramafic intrusion

# Lappvatnet “Jack-Straw” Peridotite

(host/nickel source rock)

# Lappvatnet Drill Hole LAP22-19 Core with Individual Nickel Assays

Coarse-grained pentlandite:  $(\text{Ni}, \text{Fe})_9\text{S}_8$

**3.02% Nickel over 5.66 metres  
within a 9.0-metre interval  
grading 2.35% Nickel**

# Lappvatnet Drill Hole LAP22-25 Core with Individual Nickel Assays

**4.04% Nickel over 5.76 metres within a 18.28-metre interval grading 1.49% Nickel**

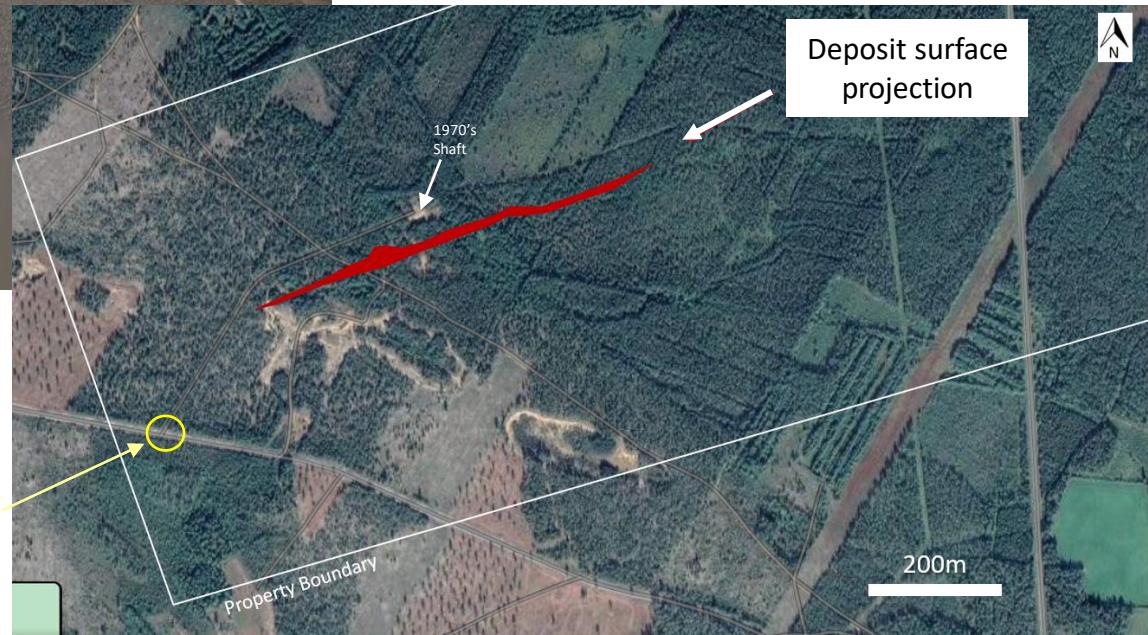

# Year-Round Access to Lappvattnet

(excellent access to other projects as well)

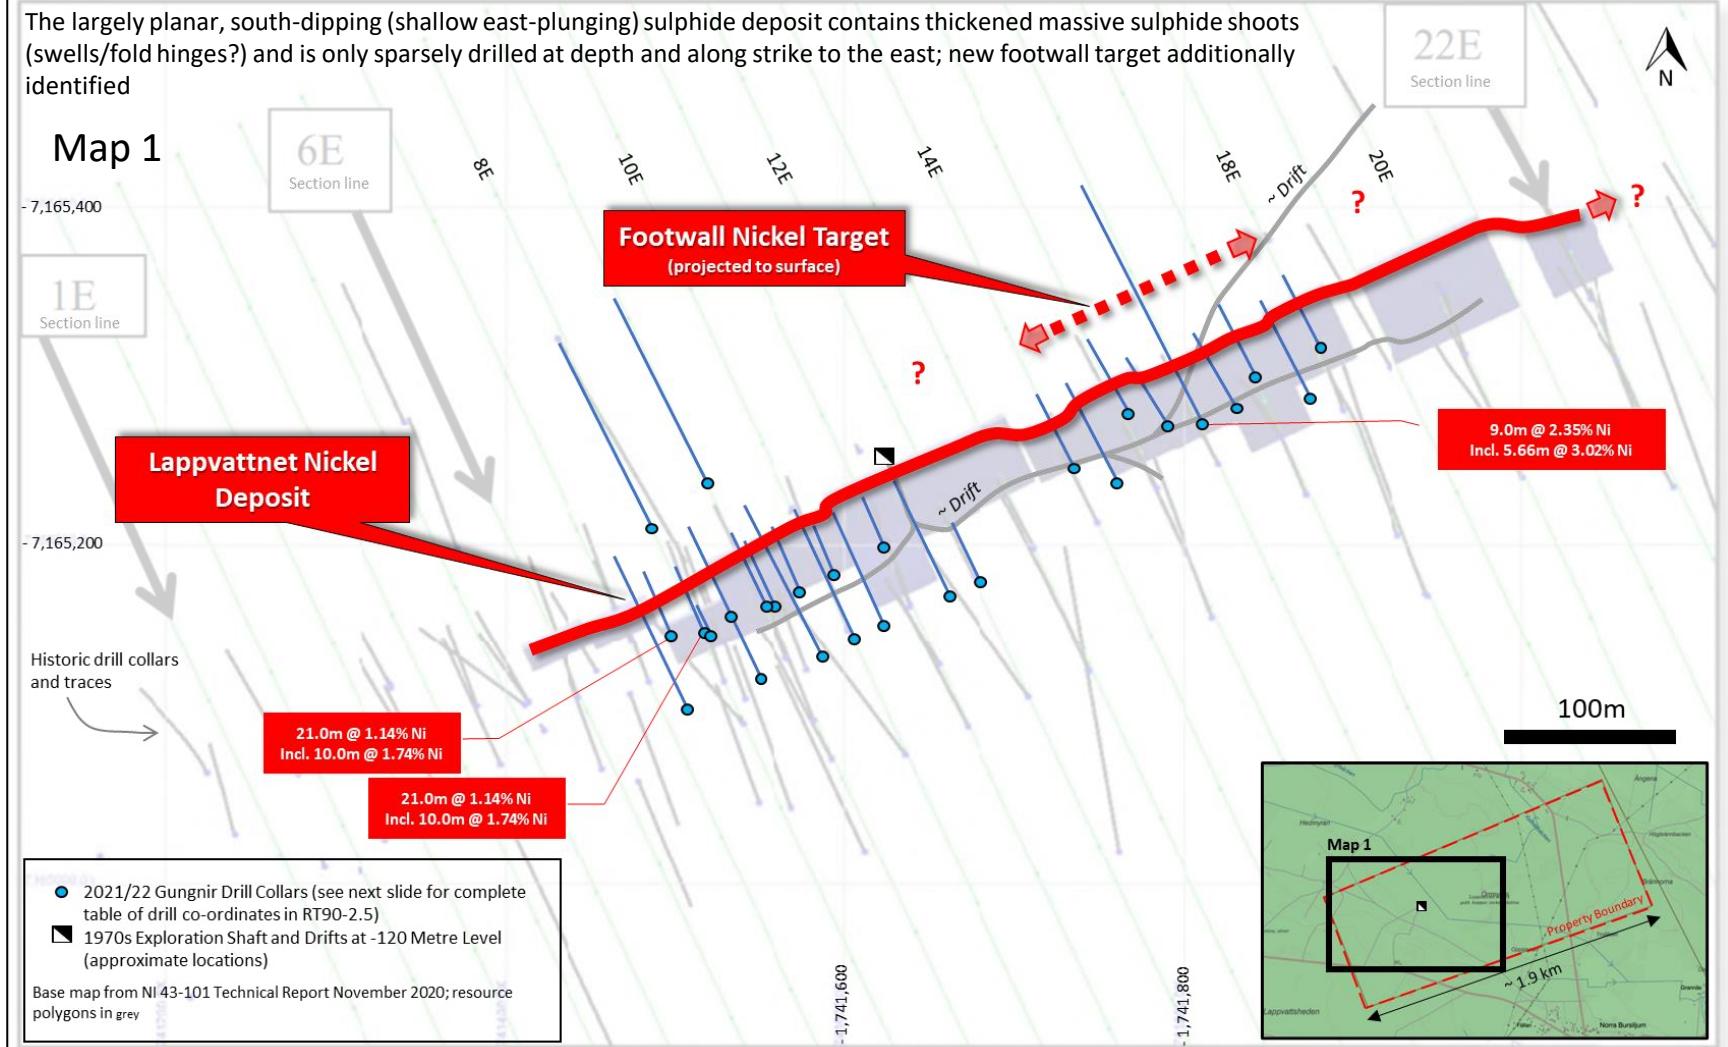

Street View Photo  
From Here

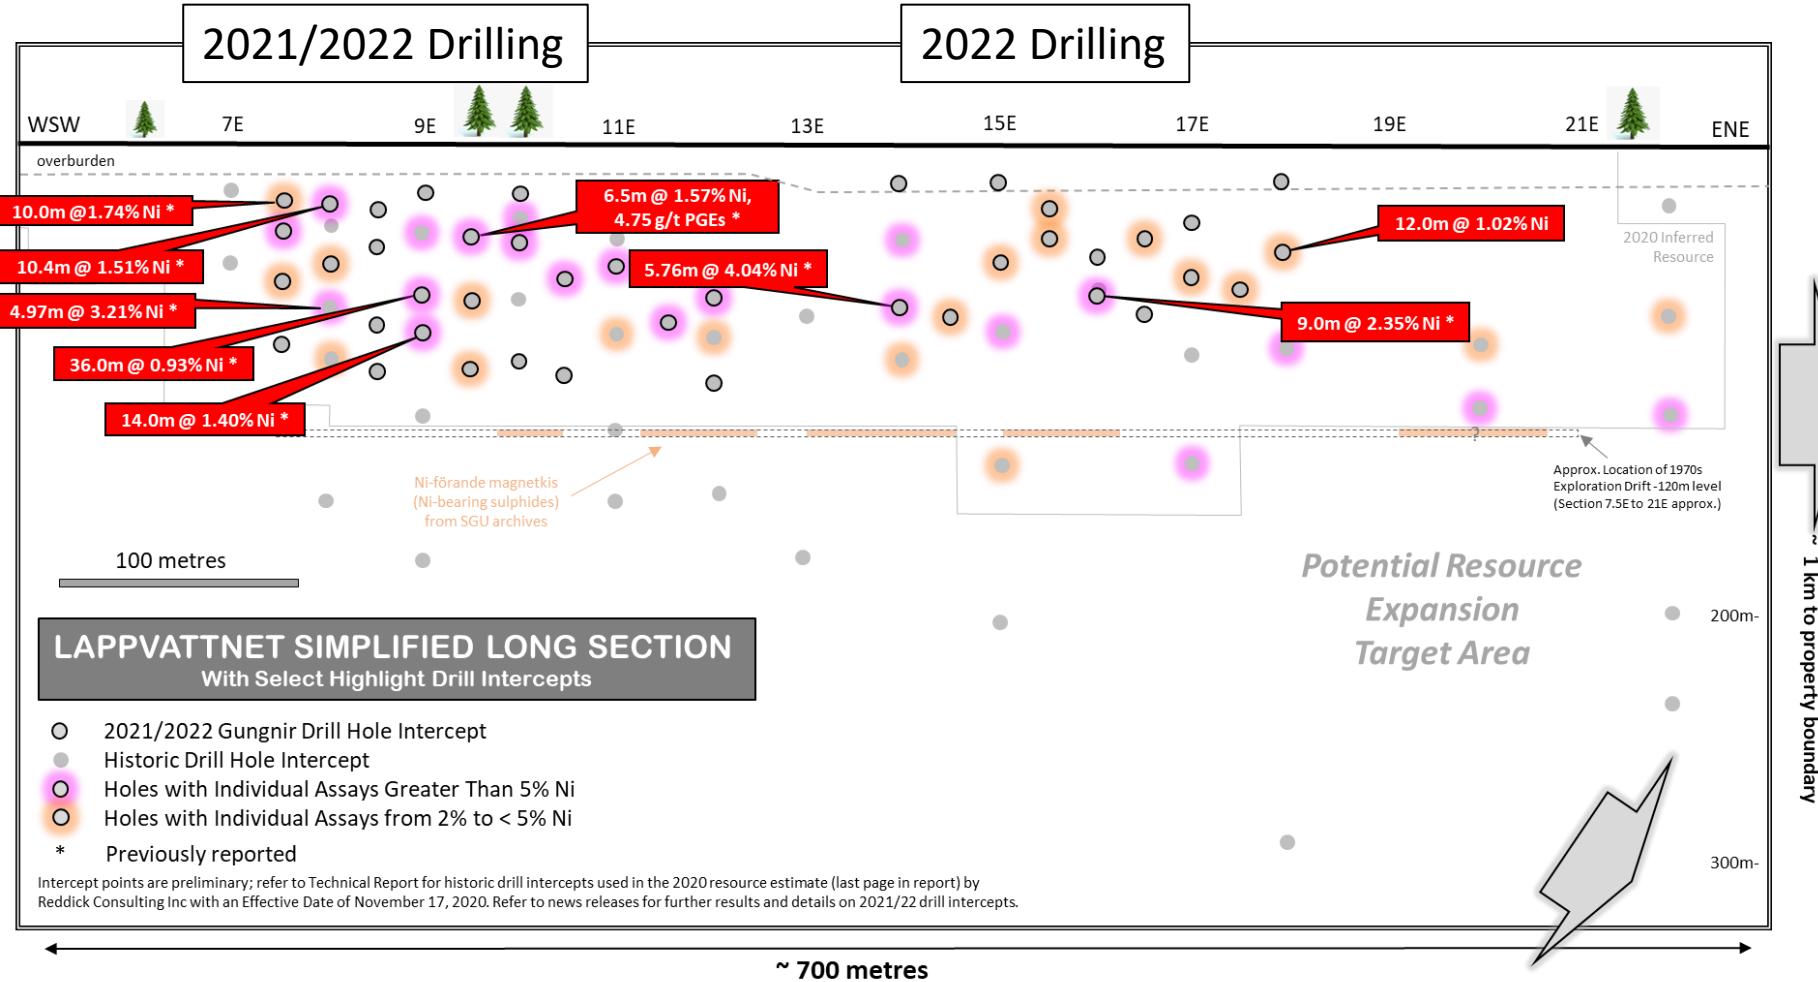

# Lappvattnet Deposit Plan Map

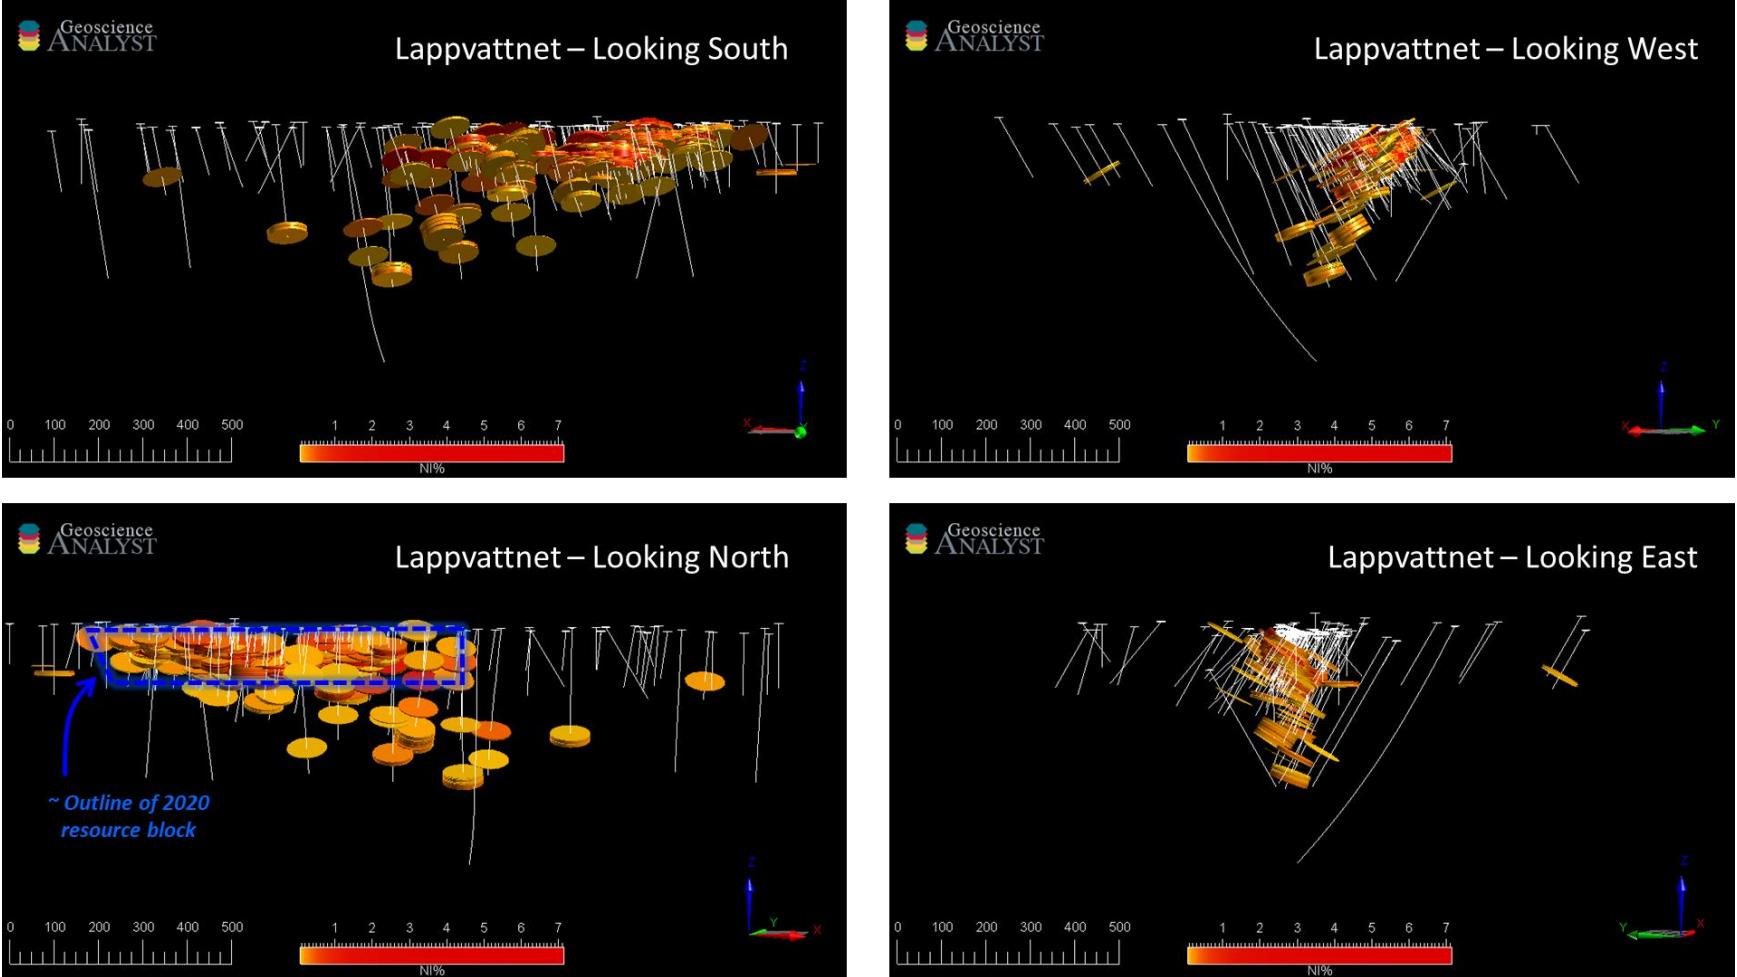

The largely planar, south-dipping (shallow east-plunging) sulphide deposit contains thickened massive sulphide shoots (swells/fold hinges?) and is only sparsely drilled at depth and along strike to the east; new footwall target additionally identified

# Lappvattnet Deposit Long Section

# Lappvatnet 3D Views (Ni Plotted)

# Lappvattnet 2021 Assays

## 2021 Drill Results from Western Part of the Lappvatnet Deposit (Section 7E to 11E)

# Rormyrberget Nickel Project

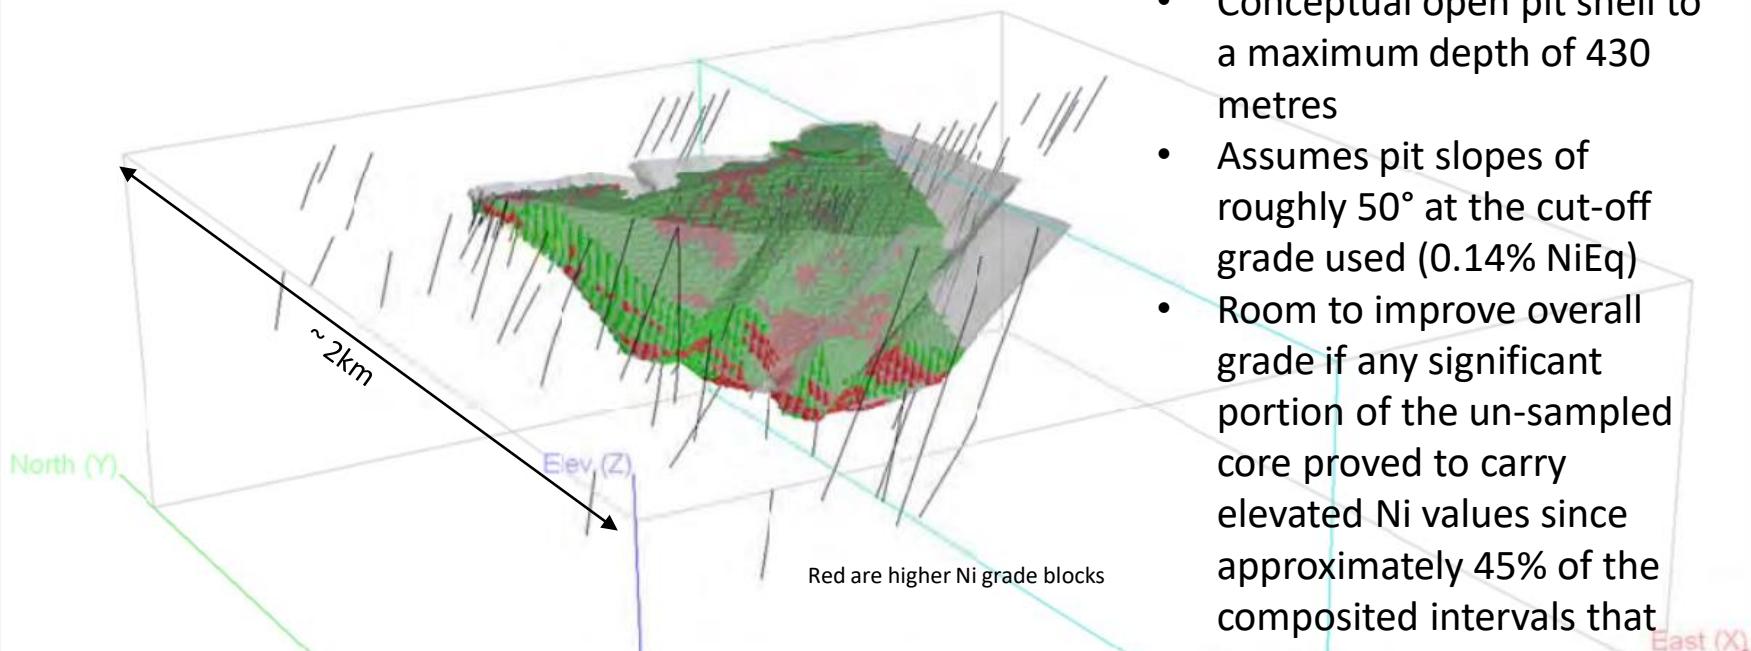

- Larger, lower grade nickel resource 40 km south-west of Lappvatnet
- Room to improve grade + potential for higher-grade nickel shoots within the deposit
- Evaluating options to move this project forward

Select drilling highlights from previous operators:

Hole ID	From (m)	To (m)	Length (m)	Ni (%)	Cu (%)	Co (%)

# Rormyrberget Conceptual Pit

Looking NE from Reddick 2020 Report

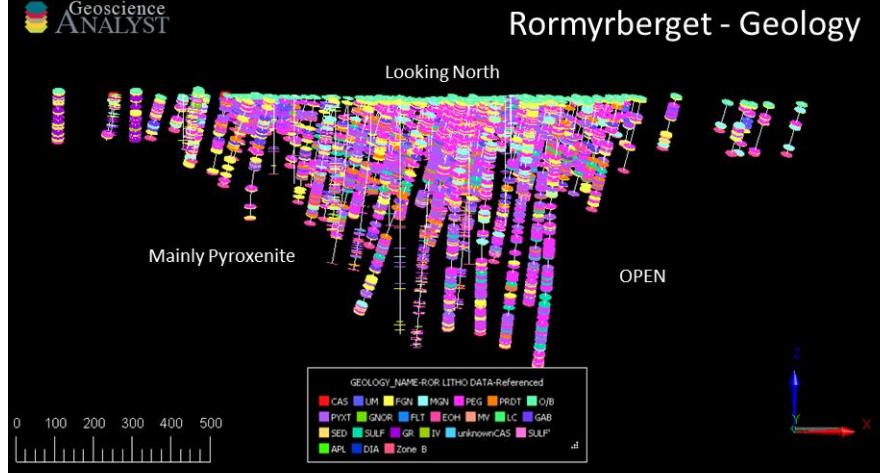

- Conceptual open pit shell to a maximum depth of 430 metres
- Assumes pit slopes of roughly 50° at the cut-off grade used (0.14% NiEq)
- Room to improve overall grade if any significant portion of the un-sampled core proved to carry elevated Ni values since approximately 45% of the composited intervals that contribute to the MR estimate are currently included at nil values

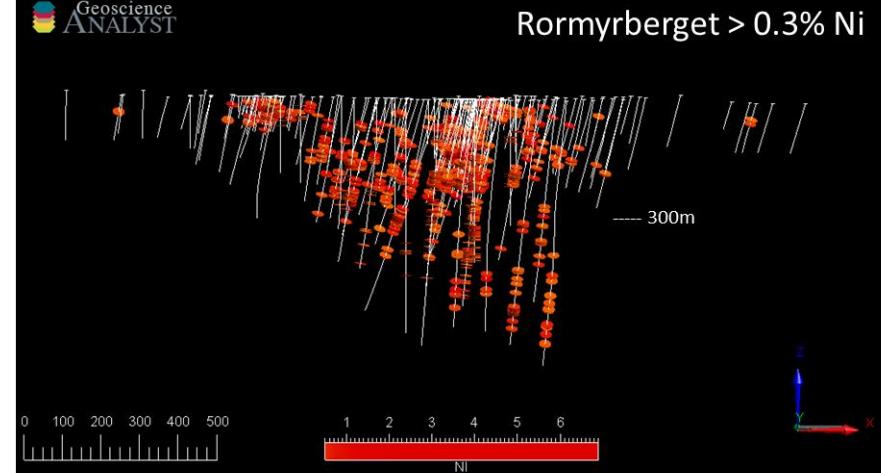

Cut-off NiEq%	Grade	Tonnes	Ni%	Cu%	Co%	NiEq
> 0.10		56,618,619	0.16	0.02	0.008	0.18
> 0.12		46,163,069	0.17	0.02	0.008	0.20
<b>&gt; 0.14</b>	<b>36,746,014</b>	<b>0.19</b>	<b>0.02</b>	<b>0.009</b>	<b>0.21</b>	
> 0.20		17,159,491	0.24	0.02	0.010	0.27
> 0.25		8,356,553	0.28	0.03	0.011	0.32
